Innovations in medical surgery and therapy - this is what we are committed to.

Leading medical technology companies around the world rely on the 3D navigation technologies from NDI - the market leader for more than 20 years. Our competence as an innovative high-tech company supports the implementation of modern, digital solutions in medical fields of application and is a central component of our success.

INSIDE

People work for NDI at four locations around the world. The cultural diversity in our successful company and the requirements of our global customers ensure a motivating work environment. The knowledge, enthusiasm and experience of our employees are essential for our success. We know each other by name - including our colleagues in Canada, the USA and Hong Kong. We trust, respect and are honest with each other.

TASKS

In our Research & Development department we develop new technologies for the production and testing of sensors and tools. For this area we are looking for you to be the right hand of our Product Owner:

- You create and maintain project plans, delegate tasks to the team, define and control goals of individual project phases and document the implementation for our management
- Understanding customer requirements for electromagnetic sensors and tools and translating them into a technical concept is one of your main tasks.
- You will also be in close contact with our suppliers, for example to clarify material selection and procurement, organize prototype construction and test initial samples
- Release newly developed products after carrying out verification and validation - of course considering the requirements in the medical environment according to ISO 13485

PROFILE

- In addition to a successfully completed Bachelor's or Master's degree in Science, Arts or Engineering, you have several years of professional experience as a project manager and a great deal of know-how up your sleeve.
- You are proficient in common project management techniques - preferably in an agile environment
- You are well versed in the areas of joining/adhesive technology, plastics, electronics, assembly and connection technology, plug-in connections, data lines, measurement technology and, of course, sensor technology.
- You have a very good command of German and English in order to be able to communicate with our colleagues, customers, and suppliers anywhere in the world
- Are you outgoing, a good communicator and do you enjoy organization and also actually working on products? Then we should get to know each other!
